02/12/2012

- ▶ Biometrics identify people by measuring some aspect of individual anatomy or physiology.
- ▶ Gileadites, Jacob, etc.
- ▶ US-VISIT program, Europe's Schengen visa, IDF, MOT, PIBA.
- ▶ Signatures, face recognition, fingerprints, iris codes, voice recognition.
- ▶ 1.5 Billion USD in 2005.

<http://www.kdati.org.il/shibbole/inf/gemel/gemel-main.htm>

- ▶ Very weak authentication mechanism.
- ▶ Who is liable?
- ▶ How do we verify signatures?
- ▶ What is a signature?

CC0 - Tomer Ashur

- ▶ Yet, it works in practice.
- ▶ Automation verification doesn't.
- ▶ fraud and insult rates.
- ▶ The equal error rate.
- ▶ Computer assisted decision.

Face Recognition

Taken from Yediot Achronot

- ▶ We recognize each other. Yet, computers do not easily recognize us.
- ▶ How? Can computers do it?
- ▶ Can we recognize strangers?

Personal Album

Face Recognition

- ▶ Does it work?
- ▶ Is it useful?
- ▶ Face recognition accounts for 19% of the market.

- ▶ Like calculus, fingerprint were discovered by more than one person.
- ▶ Black list or white list?
- ▶ Equal error rate of 1%.
- ▶ Forensics?
- ▶ Does it work?

Fingerprints - Cont.

Making an Artificial Finger *directly from* a Live Finger

How to make a gummy finger

Pour the liquid into the mold.

Put it into a refrigerator to cool.

It takes around 10 minutes.

The gummy finger

- ▶ Can computers do it?
- ▶ Accounts for 43.5% of the market.

- ▶ Does it work?
- ▶ How does it work?
- ▶ Can it be manipulated?
- ▶ Can computers do it?
